FTP Client Settings Configuration	5

Introduction

An incompatibility between Safari for OS X and Java Standard Edition (SE) version 1.6.0 and later prevent LTO-3A drag-and-drop operation within the Safari browser. The LTO3-A Stand Alone Java Applet supports drag-and-drop operations with Java SE version 1.6.0 and later.

Installing the LTO-3A Java Applet

Download the LTO-3A MAC OS Java Applet from: <u>http://www.quantum.com/ServiceandSupport/SoftwareandDocumentationDownloads/LTO-</u> <u>3ADrive/Index.aspx</u>

Modifying System Configuration

Mac OS x IP Settings Configuration

Set the IP address of the Ethernet port to which the LTO-3A is physically connected.

1. From the OS X Dock, select System Preferences.

The System Preferences window displays.

2. In the Internet & Wireless section, select Network.

The Network window displays.

	Location:	Automatic	
Ethernet 1 Connected Ethernet 2 Connected	<u></u>	Status:	Connected Ethernet 2 is currently active and has the IP address 10.10.10.2.
FireWire	¥	Configure IPv4:	Manually
		IP Address:	10.10.10.2
		Subnet Mask:	255.255.255.0
		Router:	
		DNS Server:	
		Search Domains:	
			Advanced

- 3. On the Network window, do the following:
 - a) In left panel of the window, select the Ethernet port number to which the LTO-3A unit is physically connected.
 - b) In the **Configure IPv4** field, select **Manually** from the drop down menu.
 - c) In the **IP Address** field, change the Ethernet port to the IP Address 10.10.10.2.
 - d) In the **Subnet Mask** field, change the Subnet Mask to 255.255.255.0.

Configuring the LTO-3A Java Applet

FTP Client Settings Configuration

- 1. Launch the LTO3-AvClient Java applet.
- 2. Select the **Configuration** tab in the top middle of the Java applet window.

6. In the FTP Connections Option area, double click **root@10.10.10.10:21**.

LTO-3A initializes.

Note: This action takes less than one minute.

The host is now connected to the LTO-3A.
