1) Top of character to be $.06 \pm .02$ below top edge of label.

2) Line Width = $.03 \pm .02$

3) DLT labels have six characters. The first 3 characters are alphabetic and the last 3 characters are numeric. Numeric characters shall be incremented sequentially for all tags in package of sheets. Alphabetic characters should be identical for all tags in package of sheets. When multiple packages of sheets are shipped, alphabetic and/or numeric characters will be different for each package of sheets. Cleaning DLT labels will have 6 characters, first 3 characters will always have an alphabetic value of CLN. The last 3 characters are numeric. Numeric characters shall be incremented sequentially for all tags in package of sheets. Supplier will include with their shipping documentation the start and end of the alphabetic/numeric sequence for all packages of sheets in every delivery.

4) All parameters shall fall within max/min values of table. When tested using a PSC quick check 500 barcode tester.

Material Kimdura label stock. With bars printed using high resin based ribbon (**NO Lamination**).
