About the Offline File Manager (for Microsoft Windows) Client

The **Offline File Manager (for Microsoft Windows)** application allows a StorNext client to perform data movement and metadata operations within the Windows Explorer interface when a relation point is created within the StorNext file system.

The **Offline File Manager (for Microsoft Windows)** application gives you visibility into the online and offline state of files, and access to services to use menu choices to request that Storage Manager store, retrieve, or truncate content.

i Note: No license key is required to use the Offline File Manager for Windows application.

Features

The **Offline File Manager (for Microsoft Windows)** application consists of the following:

- A Windows Explorer extension for icon overlays and context menus.

i Note: The icon overlays display a file that is truncated and a file that is retrieved. If an icon overlay is not displayed, then a file has never had a copy stored.

- A notification receiver and a user interface.
- A command line tool (**snofflinecmd**).

The application takes advantage of the [StorNext Web Services Commands \(V2\) API](#), and the available actions include:

- Retrieving files.
- Truncating files.
- Storing files.

For more information, see [Offline File Manager \(for Microsoft Windows\)](#).

How To Download the Offline File Manager (for Microsoft Windows) Application

The Offline File Manager (for Microsoft Windows) client is supplied as a standard executable (.exe) file. See [How To Download the Offline File Manager \(for Microsoft Windows\) Application](#).
