Release Notes: FlexSync 3.0

FlexSync 3.0 includes enhancements and bug fixes. To view a list of resolved issues and known limitations, see [Change Requests: Known Issues and Fixed Issues on page 5](#).

Operating Systems No Longer Supported Effective with FlexSync 3.0

- RedHat Enterprise Linux (RHEL) 6
- CentOS 6
- Debian 9

New Features and Enhancements in FlexSync 3.0

- You can now synchronize (read/write) to an S3 repository (this functionality is also referred to as FlexSync-object). FlexSync-object includes support for:
 - An Amazon Web Services (AWS) S3 repository, or a Quantum ActiveScale S3 repository.
 - Multi-part uploads.
 - AWS Signature Version 2 (V2) and AWS Signature Version 4 (V4) signing.
 - Hypertext Transfer Protocol Secure (HTTPS) communication protocol.

Overview of FlexSync-object

Within the StorNext Unified User Interface (UI), you can configure FlexSync-object to synchronize data from multiple sites to an S3 repository. The UI allows you to configure basic task configuration, management, and monitoring. The FlexSync-object functionality is designed as a Revision Control System (RCS) and it provides typical features such as check-in (commit), check-out, and update (pull) to manage multiple revisions of files.

At **site A**, you can:

1. Initialize your S3 repository for use by FlexSync.
2. Connect your S3 repository to your StorNext file system.
3. Edit your file(s).
4. Commit (synchronize) your file(s) to your S3 repository.

At **site B**, you can:

1. Connect to the same S3 repository as **site A**.
2. Synchronize your local repository based on the contents of your S3 repository.

At both sites, you can:

- Edit, commit, and update your data.
- Configure automated tasks to perform the synchronization to your S3 repository.

Limitations for FlexSync-object

The following are limitations of the FlexSync-object functionality:

- The StorNext file system is the only supported file system.
- StorNext managed directories are not supported.
- Named streams are not supported.
- Thin/sparse file system access is not supported.
- A file is written to an S3 repository as an object; in other words, there is no file system naming in the S3 repository.
- The UUI supports most key functions; however, you cannot perform a manual check-out, a manual check-in (commit) or a manual update using the UUI. You can only perform a manual check-out, a manual check-in (commit) or a manual update using the FlexSync CLI.
- Beginning with FlexSync 3.0, you can download the [FlexSync Man Pages Reference Guide PDF](#). The following are new FlexSync-object specific CLI commands (for complete details, refer to the [FlexSync Man Pages Reference Guide PDF](#)):

New for /opt/quantum/flexsync/bin/flexsyncadmin

- add-default-object-task
- add-object-task
- check
- clean
- delete
- edit-register-config
- edit-repo-config
- getconfig
- init
- register
- repos
- rstconfig
- setconfig
- unregister

New for /opt/quantum/flexsync/bin/flexsync

- checkout
- commit

- copy
 - diff
 - dump
 - get
 - help
 - info
 - list|ls
 - log
 - mkdir
 - revert
 - update
- Beginning with FlexSync 2.3, log files are located at **/var/log/flexsync**.

 **Note:** For FlexSync 2.2.4 (or earlier), log files are located at **/opt/quantum/flexsync** and **/var/log/messages**.

- When you execute a daemon or CLI command, the information is logged in a respective file, as follows:
 - For **flexsyncd**, the log file is located at **/var/log/flexsync/flexsyncd.log**.
 - For **flexsyncadmind**, the log file is located at **/var/log/flexsync/flexsyncadmind.log**.
 - For **flexsync**, the log file is located at **/var/log/flexsync/flexsync.cli.log**.
 - For **flexsyncadmin**, the log file is located at **/var/log/flexsync/flexsyncadmin.cli.log**.
- A log file is rolled using a standard Linux **logrotate** function; by default, a log file is rolled when its size exceeds 100 MB. The configuration file is located at **/etc/logrotate.d/flexsync_logrotate**. For more information, see **Configure FlexSync Log Maintenance** on the [Troubleshooting Tools](#) page.

Important Information about Your FlexSync Installation or Upgrade

You must install or upgrade FlexSync on each system using the feature, including the source destination, the target destination, and the managing appliance.

 **Caution:** Mixed versions of FlexSync daemons is not supported and results in a communication error. You must install the same version of FlexSync, or upgrade to the same version of FlexSync on all of the hosts or systems using Flexsync. A newer version of the Flexsync daemon cannot communicate with an older version within a configuration, or on another host or system.

Information about Storage Manager Storage of Temporary Files and FlexSync

As part of the replication process, FlexSync creates temporary files on the destination. If your destination is a managed StorNext directory, then it is not desirable to allow StorNext Storage Manager to store the temporary files as it might cause problems in some cases. To prevent Storage Manager from storing the temporary files you must update the TSM configuration file, **excludes.store** entry depending upon the version of FlexSync you are running.

For complete details, see [Storage Manager Storage of Temporary Files and FlexSync](#).

For additional information about FlexSync, visit the [FlexSync Documentation Center](#).

Related Product Release Notes

Configured and managed through a simple but powerful graphical user interface, FlexSync is an optionally licensed feature for use with StorNext. Visit the [Quantum Documentation Portal](#) to stay up-to-date with the other Quantum products in your environment.

Change Requests: Known Issues and Fixed Issues

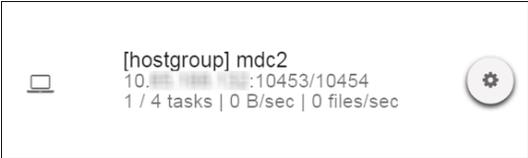

The following tables present known issues and fixed issues for FlexSync.

Known Issues

ID	Description
QSYN-806	Tasks started with the flexsyncadmin start-task command are exempt from the flexsyncd(8) maximum concurrent task limit. As a result, your system might experience higher than normal system resource usage.

ID	Description
QSYN-826	<p>Case sensitive settings (caseInsensitive=false) must be configured on both the source and destination hosts. Otherwise, the destination host will merge two files/directories that match on the identical spelling of a file name, even when the names do not match on case.</p> <div data-bbox="397 436 1456 869" style="background-color: #e6f2ff; padding: 10px;"><p>Example</p><p>The source host is configured to honor case sensitivity (caseInsensitive=false). The following 2 files exist on the source host:</p><ul style="list-style-type: none">• ABC• abc<p>Both files are replicated to a destination host that has not been configured to honor case sensitivity (caseInsensitive=true). The destination host does not recognize a difference between the 2 file names, so they are merged into 1 file:</p><p>ABC</p></div> <p>Workaround: Configure your target host with the same case sensitivity setting as your source host. See the StorNext Man Pages Reference Guide.</p>
QSYN-829	<p>Under the following circumstances, FlexSync might start repeatedly replicating the same content:</p> <ul style="list-style-type: none">• When source file systems are replicated with the auditing feature enabled, the auditing feature will make further changes to the source file system. As a result, FlexSync might interpret the files as candidates for additional replication.• Read activity in the file system might cause FlexSync to scan for content to replicate. <p>Both instances <i>usually do not</i> result in additional data transfers by Flexsync. However, under certain circumstances, such as when extended attributes are replicated, this issue can occur.</p> <p>Workaround: Do not configure a replication task if the auditing feature is enabled on the source file system, or when replicating extended attributes.</p>

ID	Description
QSYN-911	<p>Under the following specific circumstances, reverse tasks can overwrite the original source data:</p> <ol style="list-style-type: none">Create a replication task.While the task is estimating, suspend it.Create a corresponding reverse task.Start both the original source and corresponding reverse tasks. <p>Workaround: Do not simultaneously run the original source task and its corresponding reverse task.</p>
QSYN-912	<p>When viewing a Task Report, you might see two vertical scroll bars if the browser window is not tall enough to display all of the line items.</p>
QSYN-1256	<p>Mixed versions of FlexSync daemons is not supported and results in a communication error.</p> <p>You must install the same version of FlexSync, or upgrade to the same version of FlexSync on all of the hosts or systems using Flexsync. A newer version of the Flexsync daemon cannot communicate with an older version within a configuration, or on another host or system.</p> <p>See Considerations in the FlexSync Documentation Center.</p>

ID	Description
QSYN-1356	<p>The FlexSync Dashboard host status display contains an activity monitor that displays the following information:</p> <ul style="list-style-type: none"> • The number of active tasks. For example, 1 / 4 tasks. • A throughput number in bytes per second. For example, 10 B/sec. • A count of files being transferred per second. For example, 10 files/sec.
	
	<p>The throughput number shows information about active tasks only, and is updated across the entire running time of the tasks. With multiple tasks that start and finish at different times, the throughput number can be artificially low because it no longer includes one or more tasks that were also consuming resources.</p> <p>Also, because the information is captured across different tasks and at different points in time within each task and then aggregated at the user interface, it is unlikely to accurately represent the data being transferred at a specific point in time.</p> <p>These factors combine to make it difficult to determine the real bandwidth consumption until a task completes. At that point, the exact number of bytes transferred and elapsed time of the replication pass are available in the Task Report.</p>
QSYN-1357	<p>The Bandwidth Throttling option works by providing the requested number of credits each second to be shared among all of the active tasks. If no tasks have run for at least one second, the next task to start finds one second's worth of credits available immediately.</p> <p>During the first second of replication for that task, it is possible for the task to consume twice the requested bandwidth rate.</p> <p>i Note: This might result in the per-host activity monitor displaying an aggregate throughput higher than the bandwidth limit until more time elapses and that extra second's worth of bandwidth consumption is averaged in across a longer interval.</p>
QSYN-1486	<p>If you use a managed file system, do not use a directory associated with a storage manager policy as the source path or destination path of a task.</p> <p>i Note: Sub-directories of these directories and their descendants are permitted as source and destination paths.</p>

ID	Description
QSYN-1881	<p>If you enable debug logging and run a task for an extended period of time, and then attempt to display a task report using the GUI, the progress might continue to spin.</p> <p>See the flexsyncd man page for information about the debug logging option (--debug -d).</p>
QSYN-2468	<p>There is a chance if running the new UI, after an upgrade from 6.3.1 to 7.0.1 one may need to cycle flexsync in order for the new UI to connect?</p> <p>To restart the See the flexsyncd man page for information about the debug logging option (--debug -d).</p> <p>If you upgrade FlexSync Application, you need to restart the FlexSync daemons if they were not stopped prior to the upgrade. See Restart the FlexSync Daemons.</p>
QSYN-3096	<p>In the TSM logs, you might see the following errors:</p> <pre data-bbox="399 730 1456 800">XXX: Invalid open ID passed to mdt1devGetWASStorageRestIF()...</pre> <pre data-bbox="399 852 1456 921">YYY: Invalid open ID passed to mdt1dev_get_dev_type()...</pre> <p>Workaround:</p> <p>You can ignore the errors.</p>
QSYN-3136	<p>When you suspend a task, the operation might require additional time to process because FlexSync is performing asynchronous operations to receive data.</p> <p>Workaround:</p> <p>To interrupt the process, restart the flexsyncd daemon.</p>
QSYN-3193	<p>When you disable the Force Rescanning option, FlexSync forces a full file system scan with every replication pass.</p> <p>Workaround:</p> <p>Configure the Force Rescanning option to a high value such as 365 (or greater) days.</p>

ID	Description
QSYN-3385	<p>If two files from two different checkout directories that contain identical path names, modification times and file sizes are committed at approximately the same time, the first file is successfully committed and synchronized to your S3 repository, whereas the second file is not. This is similar to two users writing to the same file in a file system, except in that case, the second writer succeeds. FlexSync looks to commit the second file, but does nothing because the file appears to have already been committed; the file is not processed and a conflict is not reported.</p> <p>You might only notice this issue when you view your S3 repository, or check out another directory and inspect the file. If you notice your repository content is not valid, performing another commit process results in no action being taken. FlexSync considers the file to already be committed.</p> <p>Workaround:</p> <p>To work around this issue, do one of the following:</p> <ul style="list-style-type: none"> • To retain both files: <ul style="list-style-type: none"> ◦ Move the second (non-repository) instance of the file to a new name. ◦ Run the <code>/opt/quantum/flexsync/bin/flexsync get</code> command to retrieve the existing file from the repository and place it in the original name. <p> Note: You must provide the destination path in the command.</p> <p>Example</p> <pre data-bbox="472 1079 1458 1215">/opt/quantum/flexsync/bin/flexsync get flexsync://reponame/path/to/testfile /stornext/site1/checkoutdir/path/to/testfile</pre> <ul style="list-style-type: none"> ◦ At the next commit, the renamed file appears to be newly created and that instance of the file is synchronized to your S3 repository with its new name. • To retain the second instance of the file: <ul style="list-style-type: none"> ◦ Run the <code>touch</code> command to update the modification time (mtime) of the second file. ◦ At the next commit, FlexSync acknowledges the file does not match the content in the S3 repository and the file is synchronized to your S3 repository with the same name, effectively replacing the first commit.

ID	Description
QSYN-3487	<p>If you checkout to a sub-directory within a directory that is already checked out, you might not be able to update or commit data to your S3 repository.</p> <p>This could also result in additional data (from the sub-directory) that is committed to your S3 repository if you attempt to commit at the top-level directory.</p> <p>Workaround:</p> <p>Do not perform a checkout process to a sub-directory within a directory that is already checked out.</p>
QSYN-4391	<p>If you execute the <code>/opt/quantum/flexsync/bin/flexsync update</code> command, in the early percentages, the Postprocessing output might display an incorrect amount of time to complete the process. See the blue text in the example below.</p> <p>Example</p> <pre>Postprocessing... Postprocessing... 0% [>] 03h20m32s 4 files/sec Postprocessing... complete [15 seconds] Complete.</pre> <p>Workaround:</p> <p>To work around this issue, allow the Postprocessing process to continue. As the Postprocessing process continues, the time calculation improves and becomes accurate.</p>

Fixed Issues

FlexSync 2.3.1 and FlexSync 3.0

ID	Description
QSYN-4262	Fixed an issue where on a single Node Xcellies Workflow Director (XWD) the API gateway needs to be handled.
QSYN-4265	Fixed an issue where flexsyncd occasionally core dumps.
QSYN-4266	Fixed an issue where FlexSync 2.3.0 might not be picked up by the Unified User Interface (UI).
QSYN-4291	Fixed an issue with the UII registration with multiple API gateways not working.
QSYN-4300	Updated the default tsm-media-reqs configuration parameter from unlimited to 3 .

ID	Description
QSYN-4314	Updated the default shared-conn configuration parameter from true to false .
QSYN-4338	Fixed an issue where FlexSync replication gets stuck if media is unavailable.
QSYN-4343	Fixed an issue where flexsyncd occasionally deadlocks.

FlexSync 2.3.0

ID	Description
QSYN-2151	Prune scan is taking a long time.
QSYN-2179	flexsyncd crashes if not enough disk space.
QSYN-2340	FlexSync needs its own log file.
QSYN-2442	Should have better error if wrong password entered for flexsyncadmin .
QSYN-2446	The flexsyncadmin man page does not show options for edit-host.
QSYN-2466	Need to support transferring ACLs from NFSv4 (Isilon) system into StorNext.
QSYN-2635	Supporting multiple gateway registration.
QSYN-3082	Need better error than "no media available for retrieval of XX truncated".
QSYN-3216	Replace Error message "File Unexpected truncated" with better errors.
QSYN-3284	Need log file for CLI operations.
QSYN-3287	When you enable debugging logging, do not flood with logs.
QSYN-3308	Implement NFS ACL support in FlexSync.
QSYN-3362	Drop support for RHEL/CentOS 6 and Debian 9.
QSYN-3490	Documentation: Update exclusion documentation to state that you cannot use a leading space, an ending space, a file name with a space, and/or a directory with a space.
QSYN-3499	Exclusion list string, needs to parse out starting space delimiter " " characters.
QSYN-3568	Documentation: SMB share generated files from windows client failing to replicate from NFSv4 source to NFSv4 target.
QSYN-3638	Documentation: As a user, I want to know where a log file is located and how to configure log rolling.
QSYN-3662	Documentation: As a user, I want to know how to configure items for NFSv4 (Isilon).

FlexSync 2.2.4

ID	Description
QSYN-962	FlexSync should retry failed network operations.
QSYN-1356	Improve accuracy of per-host throughput monitor.
QSYN-1401	sparse file replication needs improvement.
QSYN-2053	flexsyncd uses a lot of memory on the target node when retrieving truncated files.
QSYN-2089	flexsync task does not complete, flexsync task forever in waiting: can't handle case where flexsync does not receive TSM stats.
QSYN-2094	During data recovery activity, attempts to restore individual (large) files failed.
QSYN-2140	Need retry logic for transient media retrieval errors.
QSYN-2314	No marker available: No such operation, please disable option event
QSYN-2337	Filter check is skipped on the source for unmanaged mdarchive enabled file system.
QSYN-2346	flexsync_db_list_core got stuck with big task log.
QSYN-2373	media_by_files rest api takes too long for large number of truncated files.
QSYN-2432	Flexsync exclusions will block all files if a space is incorrectly left at the end of the entry
QSYN-2438	Throttle the tsm file retrieval failure log entries
QSYN-2482	Suspending a task can cause it to report an error state
QSYN-2484	flexsync cli remote request getting disconnect errors for managed file system
QSYN-2535	Some input parameter validation needed for flexsyncadmin
QSYN-2598	task report errors reported appears to always be one more than actual number
QSYN-2610	flexsync reports an estimation error every time if a file has a resource fork larger than 4k
QSYN-2657	Fix retrying on source flexsyncd restart
QSYN-2672	Provide summary statistics after estimation phase for better accountability
QSYN-2673	metadata changes are mishandled for truncated files on a local host task

ID	Description
QSYN-2676	Investigate avoiding reading truncated files when metadata only changes are made and a start-scan is run
QSYN-2678	File not transferred to non-namedstream FS if named stream present on file
QSYN-2695	Flexsync tmp files are inadvertently getting truncate exclude set from apple double file exclude designation
QSYN-2697	Provide timing stats for copying files during task run
QSYN-2706	The api needed to provide some kind of time out for waiting of incoming api/v1/rtv_files_by_media_data and api/v1/rtv_files_by_media_stat to prevent Flexsync to hang in case of TSM failure.
QSYN-2708	Setting versioning enabled can leave tmp file behind when versioning occurs
QSYN-2752	hit a segmentation fault in flexsyncd
QSYN-2757	tmp file getting left on target
QSYN-2860	--times getting different results between SN FS versus EXT4
QSYN-2871	FLEXSYNCD_SAVE_TASK_PERIOD_IN_SECONDS 30*60 should be configurable
QSYN-2925	ignore-times=true doesn't work as expected
QSYN-2968	Mismatch in total_trunc_files and processed_files_count leads to replication task stopping with errors
QSYN-2983	daemon restarts after being killed, but sometimes doesn't come back online
QSYN-3044	Requests hang after networking error
QSYN-3051	Add open socket info to flexsync gather
QSYN-3137	Fix Error log to contain path
QSYN-3148	remove-task with --deletemydata not specified returns 0 instead of 1

FlexSync 2.2.2

ID	Description
QSYN-2672	Provide summary statistics after estimation phase for better accountability.
QSYN-2673	Metadata changes are mishandled for truncated files on a local host task.

ID	Description
QSYN-2692	SM versioning test failing in cluster reporting unexpectedly truncated on files with metadata only changes.

FlexSync 2.2.1

ID	Description
QSYN-521	Avoid storing flexsyncd passwords plain text in flexsyncadmind database
QSYN-1222	Need a way to enable flexsync debugging without also enabling qevhttp debugging
QSYN-1776	flexsync re-replicates files when extended attrs are preserved and Apple double files were deleted from source
QSYN-1875	Add test for new ignore FSID check
QSYN-1991	When TSM is down, task sometimes not reporting error correctly
QSYN-2054	Getting connection error when TSM down and error not reported as expected in task log
QSYN-2092	Need the ability to clone a task in the CLI, rather than having to create one from scratch
QSYN-2093	Documentation: Need the ability to clone a task in the GUI, rather than having to create one from scratch
QSYN-2106	Flexsync should have more than one debug level
QSYN-2139	Versioning enabled default when task created by GUI
QSYN-2142	flexsync command should error out on bad marker or marker file
QSYN-2146	Update EULA for the StorNext 7.0.1 Release.
QSYN-2157	Documentation: Need the ability to clone a task in the CLI, rather than having to create one from scratch
QSYN-2158	Need the ability to clone a task in the GUI, rather than having to create one from scratch
QSYN-2162	After reversing a task, editing the new task cannot be submitted until scheduled replication is enabled
QSYN-2308	New flexsyncd valgrind error
QSYN-2310	Need a method to modify task name, source path, and destination path after cloning a task

ID	Description
QSYN-2312	Upgrade, backup and restore functionality should support encrypted passwords and secret key in DB
QSYN-2315	flexsync_scan_local:path: Too many open files
QSYN-2320	EPERM error in multihost test.
QSYN-2332	Clone method in GUI retains original task's schedule, leading to a race while editing the new task
QSYN-2333	GUI shows task with no schedule as being scheduled every 1 second
QSYN-2334	Gateway and smtp credentials should be encrypted
QSYN-2338	Need to change the stable-2.2 version number to 2.2.1
QSYN-2341	Convert remaining object storage flexsync test from matrix to minio
QSYN-2342	TSM down not detected correctly. Continues on to estimation pass
QSYN-2345	Audit that stuff supposed to be in 2.2.1 is actually in 2.2.1
QSYN-2347	Documentation: Update FlexSync Best Practices Guide
QSYN-2355	Documentation: FlexSync Installation steps for RedHat are incorrect
QSYN-2356	Documentation: FlexSync Installation steps need rework
QSYN-2357	Documentation: It's unclear when adding users what daemon to put
QSYN-2361	Confusing error msg on version upgrade
QSYN-2362	Duplicate task log messages for active task
QSYN-2363	flexsyncadmind reports upgrade version error when ports are inaccessible
QSYN-2364	Documentation: Add info on versioning to Best Practices section of our docs
QSYN-2372	Need to update upgrade tests for 2.2.1 and 3.0.0
QSYN-2374	Task suspend/resume has issues with the task log
QSYN-2379	Documentation: Section on Installation and Storage Manager needs delineation
QSYN-2380	flexsyncadmind reporting remote flexsyncds offline when they just need to be upgraded

ID	Description
QSYN-2381	Documentation: Update to best practices Item
QSYN-2382	status keeps reporting that flexsyncd on the remote node needs to be upgraded
QSYN-2383	Documentation: FlexSync, drop support for upgrades from pre-1.1.3 Releases
QSYN-2389	Add upgrade test back into std regression suite
QSYN-2391	Add email_reporting to upgrade tests
QSYN-2393	Documentation: Update documentation Item on hops from system to system
QSYN-2394	Documentation: Reformat the Best Practices section to make it easier to read
QSYN-2395	flexsyncadmind core dump in email reporting when a flexsyncd host runs old version
QSYN-2396	old version flexsyncd panicked when receiving http code 205 from src running 2.2.x
QSYN-2397	Error fetching fsm fsinfo
QSYN-2404	2.2.1 exclusion test failing with a licensing error
QSYN-2406	valgrind errors in stable-2.2 tests
QSYN-2407	upgrade test failing on email report
QSYN-2408	vgrind_SM_mhost failing adding hostgroup with error 5
QSYN-2409	flexsyncd incorrectly reporting offline
QSYN-2411	GUI warns user too frequently for offline nodes
QSYN-2412	Offline message prevents getting status from CLI
QSYN-2413	vgrind_mhost_SM test flexsyncadmind startup incorrectly has fsid-timer specified. Need to remove
QSYN-2417	Remove GUI popup for offline and downrev host. Add appropriate status_string to be displayed in CLI and UI
QSYN-2419	Change license from private_cloud to flex_private_cloud
QSYN-2420	Convert valgrind tests to minio
QSYN-2421	add upgrade tests for 2.1.4 to 2.2.1 and 3.0.0

ID	Description
QSYN-2422	flexsyncd coredump on 2.2.1
QSYN-2423	flexsyncadmin coredumps on 2.2.1
QSYN-2424	GUI needs to report when host is downrev.
QSYN-2429	Failed to set option sync_schedule after setting to manual
QSYN-2430	Release Notes: Document the EOL of the existing FlexSync UI
QSYN-2435	host password cannot be updated.
QSYN-2436	Test fails on fsid checking.
QSYN-2439	config-restore with downrev hosts returning 0 instead of 1
QSYN-2440	Fix valgrind upgrade test
QSYN-2445	Documentation: Update info about changing passwords

FlexSync 2.1.5

ID	Description
QSYN-1907	No warning if flexsync can't read xattr on source and preserve xattr is selected
QSYN-1950	flexsyncd segmentation fault occurs upon flexsyncd_rest_file_data_finish / flexsync_vfs_close()
QSYN-2346	flexsync_db_list_core got stuck with big task log
QSYN-2405	Data miscompare after flexsyncd restart and start-task
QSYN-2524	flexsyncd getting segmentation violation and producing core dump
QSYN-2536	Core dump in Flexsync 2.1.5
QSYN-2554	flexsyncd.pstack isn't captured on non systemd linux by flexsync_gather
QSYN-2555	flexsyncadmin valgrind errors
QSYN-2571	core dump in json_to_evbuffer
QSYN-2598	task report errors reported appears to always be one more than actual number
QSYN-2610	flexsync reports an estimation error every time if a file has a resource fork larger than 4k

ID	Description
QSYN-2673	metadata changes are mishandled for truncated files on a local host task
QSYN-2677	metadata only changes on truncated files causing "file unexpectedly truncated" errors in the network transfer case
QSYN-2678	File not transferred to non-namedstream FS if named stream present on file
QSYN-2718	stable-2.1 getting unexpectedly truncated files with metadata only changes in network case

FlexSync 2.1.4

ID	Description
QSYN-1921	segmentation fault in flexsyncd in flexsync_rtv_tsm_data_init

FlexSync 2.1.3

ID	Description
QSYN-1986	Some of the stable-2.1 tests need fixing up
QSYN-2016	Number of streams should be tunable for object storage and tape
QSYN-2017	Fix stable-2.1 error message check to match corrected error
QSYN-2075	Change the default flexsyncd data timeout to 15 minutes
QSYN-2085	enhancement: 2.1.2 introduced hard-coded limits for direct retrieval (MAX_RTV_REQ_CNT* & MAX_FILE_CNT_PER_RTV_REQUEST); these must be converted into tunables
QSYN-2087	Documentation: Number of streams should be tunable for object storage and tape
QSYN-2099	Wrong crt_last_stats_time placed in job->j_crt structure
QSYN-2102	task log needs more detail about retrieval requests
QSYN-2103	truncated file replication giving wrong final replicated count
QSYN-2108	FlexSync does not copy files with dates in the future if a cool down time has been specified
QSYN-2124	Bump up flexsync version to 2.1.3 in stable-2.1 branch
QSYN-2129	Documentation: Document mdarchive cache size requirements for truncated file replication
QSYN-2130	Restores not updating tsm options correctly

ID	Description
QSYN-2131	Error in `/opt/quantum/flexsync/sbin/flexsyncd`: double free or corruption
QSYN-2133	Compatibility Guide: Update compatibility matrix for 2.1.3
QSYN-2148	config-restore test not properly handling tsm-req-files, tsm-obj-reqs, tsm-media-reqs
QSYN-2160	fix up upgrade tests for 2.1.3
QSYN-2161	flexsyncadmin not detecting upgrade of client nodes correctly
QSYN-2309	Remove DELETEMYDATA reference from upgrade test
QSYN-2311	Need to change scheduled runs for stable-2.1 to use single variable for sntest options
QSYN-2316	10 million file replication 100k files truncated failed with timeouts
QSYN-2317	Need to port a couple of tests back from master to stable-2.1 to avoid failures
QSYN-2321	flexsyncd valgrind error in 2.1.3
QSYN-2331	20 million truncated files test failure
QSYN-2353	flexsyncd seg fault in segmented file test with 6.3.0 after unexpected timeout
QSYN-2354	data miscompare 6.4.0 with 2.1.3 segmented truncated file test

FlexSync 2.1.2

ID	Description
QSYN-1769	Enhancement request for speeding up the files_by_media query
QSYN-1904	Retrieval of truncated files very slow with object storage
QSYN-1912	Enhancing pruning work for files in a media
QSYN-1990	Documentation: Update the FlexSync information in the StorNext Compatibility Guide
QSYN-1992	Seems to require flexsyncadmin restart to clear version mismatch error. Also true for 2.1.1
QSYN-2001	Hit a data miscompare
QSYN-2002	flexsyncadmin version mismatch error needs fixing up
QSYN-2003	flexsyncd timed out after all truncated files retrieved

FlexSync 2.1.1

ID	Description
QSYN-1841	Need to add an advanced option to ignore the FSID for task operations
QSYN-1842	Documentation: Update for New advanced Tab option:FSID Check
QSYN-1843	GUI Update:Add the new option for FSID Check to the Advanced tab for Task creation.
QSYN-1876	flexsyncd panic upon failure to insert document: "SQL logic error or missing database" [with debug turned on but not strictly]
QSYN-1877	Task hangs when replicating and source file system changes - FSID check disabled
QSYN-1878	evbuffer disconnect when replicating offline files from object storage source
QSYN-1882	valgrind errors in stable-2.1.1
QSYN-1883	flexsync replication fails w/ "Failed to open existing file * No data available" if destination file truncated
QSYN-1884	fsid check disabled on stable 2.1, cannot be enabled
QSYN-1890	Needs to be investigated - Do we have 'SQLite overflow' issue with enabled AUDIT option?
QSYN-1891	Documentation: Need to reload GUI after upgrade to 2.1.1 to see FSID check option
QSYN-1895	If source machine upgraded to 2.1.1 and destination remains at 2.1, no error
QSYN-1897	new valgrind errors stable-2.1
QSYN-1900	valgrind error fix, as for stable-2.1
QSYN-1908	modify multihost_SM test to do some truncated target tests
QSYN-1909	Documentation: Define character set limitation for FlexSync
QSYN-1910	SM segment test failed due to peer disconnection under valgrind
QSYN-1913	Documentation: Need to document FSM and fsrestd timeout recommendation for object storage flexsync source
QSYN-1915	Increase the fsm and fsrestd timeout for managed tests using object storage
QSYN-1917	New valgrind errors in stable-2.1 with Multihost managed segmented file test
QSYN-1918	extend timeouts for some tests as needed
QSYN-1920	Break up treecmp database creations to avoid slow processing

FlexSync 2.1.0

ID	Description
QSYN-20	QSyncD needs email alerts
QSYN-1550	Need additional reporting to validate incomplete metadb query processing
QSYN-1552	flexsync could potentially manage auth token better
QSYN-1563	Flexsyncd core dump: FlexSync error: Failed to fetch metadata
QSYN-1636	Dealing with TSM retrieval retry mechanism
QSYN-1657	Failed to create tmp errors when file was created
QSYN-1682	flexsyncdump usage message does not list the version option
QSYN-1700	Maturity: flexsyncd core dumping
QSYN-1707	Error parsing response json: evbuffer of zero size given
QSYN-1708	No error when source upgraded to 2.0.x, destination at 1.3.0
QSYN-1713	Email Reporting: Error received when using the GUI to configure a default monthly notification schedule
QSYN-1714	regression_local_B test failed with Disconnected by peer evbuffer of zero size given
QSYN-1716	remove-task does not accept advertised options such as --all
QSYN-1721	evbuffer failure and disconnects
QSYN-1723	flexsyncadmind coredump
QSYN-1724	Truncated file error is incorrect for local replications
QSYN-1725	xattr not getting replicated correctly for MAC metadata test with 6.3.0
QSYN-1726	Documentation: As a user, I want to know how to configure an exclusion for a full path directory
QSYN-1727	Extra error when wrong password supplied to flexsyncadmin - Error parsing request json:evbuffer of zero size
QSYN-1729	Documentation: how to prepare for a flexsync host relocation?

ID	Description
QSYN-1730	Documentation: how to prepare for a flexsync host network reconfiguration, when tasks are already in place?
QSYN-1731	evbuffer of zero size message when there is a task error
QSYN-1732	flexsyncadmin show-email-reporting is not longer 2.0.2
QSYN-1734	Hosts offline after config restore. Appears to be an auth_token problem

FlexSync 1.3.0

ID	Description
QSYN-1598	Delta update failed:Timed out waiting for data
QSYN-1566	Whether or not to use delta compression should be configurable
QSYN-1653	Quick status email notification feature
QSYN-1659	Add GUI dialog to configure email reporting
QSYN-1660	Add human readable output for flexsyncadmin show-email-reporting
QSYN-1661	Improve status report syntax
QSYN-1662	Investigate coverity issues in SMTP library
QSYN-1663	Update flexsyncadmin man page to describe email reporting
QSYN-1664	Test SMTP client with more SMTP servers
QSYN-1666	Use "ASAP" model for cron scheduling versus traditional handling
QSYN-1668	Finish GUI work for email reporting
QSYN-1670	Email reporting should have configurable from address, SMTP username & password
QSYN-1673	It would be helpful if email notification would tell user to also check task reports
QSYN-1674	last letter of user name truncated when displaying SMTP user
QSYN-1675	When source is long path name, all information not available in email notification
QSYN-1677	GUI email reporting screen should not require SMTP user/password
QSYN-1678	GUI should allow user to click disabled with no other fields

ID	Description
QSYN-1679	email reporting GUI does not allow slash (incrementer) in advanced tab
QSYN-1680	Documentation: As a user, I want to know how to configure email reporting
QSYN-1681	Using one of the GUI yearly email reporting options results in invalid cron expression
QSYN-1683	flexsyncadmin coredump when disabling email reporting, possibly after backup/restore
QSYN-1684	email reporting config not preserved by backup/restore
QSYN-1685	email reporting GUI should instruct users to separate email addresses with commas
QSYN-1687	email smtp should use AUTH LOGIN instead of AUTH PLAIN
QSYN-1689	flexsyncadmind core dumping in upgrade test
QSYN-1690	flexsync status report should indicate email failure
QSYN-1692	Documentation: flexsync documentation should be explicit about destination path should not be a stornext FS mount point or some FlexSync features will have unexpected behavior such as versioning and extraneous file deletion
QSYN-1696	Documentation: Updates are needed to theNetowkring Tips and FAQ Page
QSYN-1702	Create additional automated email tests for flexsync 2.0.3 and 1.3.0
QSYN-1703	Need automated test for email reporting settings backup and restore
QSYN-1706	Documentation: Users should be told to restart GUI after upgrade
QSYN-1709	Need debian tests for 1.3.0 release
QSYN-1710	Create final 1.3.0 Build

FlexSync 1.2.3

ID	Description
QSYN-1452	This fix resolves an issue where FlexSync caused a segmentation fault due to an unhandled null pointer exception.

FlexSync 1.2.2

ID	Description
QSYN-1429	This fix resolves an issue where replicating a file with extended attributes created from Linux and an associated empty AppleDouble file resulted in a flexsyncd core dump.

FlexSync 1.2.1

ID	Description
QSYN-1386	<p>For StorNext file systems that do not have namedStreams enabled, macOS puts extended attributes into AppleDouble files. Linux continues to store extended attributes with the main file.</p> <p>This fix resolves an issue where files with a mixture of extended attributes on both the main file and in an AppleDouble file causes a FlexSync panic.</p>
QSYN-1396	<p>When syncing a previously replicated large file where only the metadata has changed, or very little of the data has changed, timeout errors can occur.</p> <p>For example:</p> <pre>Delta update of dir1/file.0012 failed: error 3: Timed out waiting for data</pre> <p> WARNING: Prior to installing the flexsync-1.2.1 RPM, you must upgrade the quantum_librsync RPM from quantum_librsync-2.0.0-1 to quantum_librsync_2.0.0-2.</p>
QSYN-1399	<p>This fix resolves an issue that causes a task error related to symbolic links (symlinks), such as the following:</p> <pre>Failed to create symlink '/Volumes/backups/Original Media/._flexsync_tmp_XIES3155.mov': File exists</pre>

FlexSync 1.2.0

ID	Description
QSYN-931	A file system's extended attributes, when created by a macOS Samba client and contained in the AppleDouble file, may be placed in the inode when the file system is replicated with FlexSync. In this situation, if you use Samba to share the replicated destination, the extended attributes may not be visible from the macOS Samba client.

FlexSync 1.1.3

ID	Description
QSYN-819	Removing a task and requesting that the versions be removed can result in flexsyncd consuming large amounts of memory and CPU when there are many versions to remove.
QSYN-1258	The Task Report displays an active task log every 11 th entry. The FlexSync Dashboard fetches logs in batches of 10, and then flexsyncd adds in the active log. If you have more than 10 task logs, then the active task log appears as the 1 st entry, the 11 th entry, and so on.

FlexSync 1.1.0

ID	Description
QSYN-797	If you try to remove a host that is offline or otherwise unavailable, then flexsyncd attempts to complete the removal of that host if it becomes available again. This results in an error and the application might become unresponsive. You cannot remove a host that is offline or otherwise unavailable. Note: The host's flexsyncd daemon must be running and reachable at its configured DNS name or IP address.
QSYN-918	The number of reported active tasks may not be consistent between the FlexSync Dashboard and FlexSync CLI.
QSYN-939	Partial configuration restores can result in inconsistent configurations and should be avoided at this time. See Restore Your Configuration in the FlexSync Documentation Center .
QSYN-947	If you are disconnected from the FlexSync Dashboard, the displayed Reload button may not work correctly. Workaround: Close the browser tab or window, and initiate a new session with the FlexSync Dashboard.

ID	Description
QSYN-1090	<p>For tasks with versioning enabled, prior to FlexSync 1.0.5, the top level directory of each version was named using colons to separate the components of the time portion of the name. For example:</p> <pre data-bbox="399 407 1456 478">src-12-14-2017-13:48:29</pre> <p>In order to be compatible with Windows clients, the naming scheme no longer uses colons. For example:</p> <pre data-bbox="399 632 1456 703">src-2017-12-14_13-50-02</pre> <p>Upon upgrading to FlexSync 1.1.0, existing version directories are renamed to match the new scheme. The expiration of existing versions will continue to operate normally.</p> <hr data-bbox="142 831 1474 835"/>

ID	Description
QSYN-1148	<p data-bbox="397 262 1448 325">Beginning with FlexSync 1.1.0, you are no longer required to include the <hostgroup_name> argument in the command syntax for the following flexsyncadmin CLI commands:</p> <ul data-bbox="397 346 649 840" style="list-style-type: none"><li data-bbox="397 346 625 378">• add-default-task<li data-bbox="397 399 535 430">• add-task<li data-bbox="397 451 535 483">• edit-task<li data-bbox="397 504 584 535">• remove-task<li data-bbox="397 556 617 588">• remove-version<li data-bbox="397 609 584 640">• reverse-task<li data-bbox="397 661 649 693">• show-task-reports<li data-bbox="397 714 609 745">• show-versions<li data-bbox="397 766 552 798">• start-scan<li data-bbox="397 819 544 850">• start-task
	<p data-bbox="397 871 1421 924">For example, prior to FlexSync 1.1.0, the <hostgroup_name> argument was required to start a replication task:</p>
	<pre data-bbox="414 987 1388 1060">/opt/quantum/flexsync/bin/flexsyncadmin -U admin -P password start-task <hostgroup_name> <dest_host_name> <task_name></pre>
	<p data-bbox="397 1123 1404 1176">In FlexSync 1.1.0 (or later), the <hostgroup_name> argument is not required to start a replication task.</p>
	<p data-bbox="397 1207 552 1239">For example:</p>
	<pre data-bbox="414 1302 1388 1375">/opt/quantum/flexsync/bin/flexsyncadmin -U admin -P password start-task <dest_host_name> <task_name></pre>

FlexSync 1.0.5

ID	Description
QSYN-1051	<p>Minor changes have been made to the Task Configuration dialog box in the FlexSync Dashboard.</p> <p>Some of the items in the Advanced tab have been moved to a new tab named Attributes.</p> <p>Also, new tasks now replicate extended attributes by default. This has a performance impact regardless of whether files contain extended attributes. If it is not required, you can disable replicating extended attributes in the Attributes tab of the Task Configuration dialog box by deselecting the Preserve extended attributes check box.</p> <p>See FlexSync Dashboard: Configure Replication Tasks in the FlexSync Documentation Center.</p>
QSYN-1106	<p>When one or more configured hosts were inaccessible, in some cases the it was not possible to create a new task through the FlexSync Dashboard.</p> <ol style="list-style-type: none"> Ensure that all configured hosts are accessible. Create the task using the FlexSync CLI. See FlexSync CLI: Configure Replication Tasks in the FlexSync Documentation Center. Upgrade to FlexSync 1.0.5.

FlexSync 1.0.4

ID	Description
QSYN-970	<p>The Force update check box and tool tip on the Task Configuration window's Advanced tab is misnamed, which could lead to confusion about what the functionality actually does.</p> <p>Resolution: The Force update check box has been renamed to Skip newer files. This functionality skips files that are newer on the destination during a replication task.</p>
QSYN-1000	<p>If SSL is disabled for a replication task, flexsyncd will not be able to communicate with the StorNext File System Manager. This failure in communication causes continuous scanning of the task.</p>

FlexSync 1.0.2

ID	Description
QSYN-895	<p>When a replication task is run from the FlexSync Dashboard and the replicated files contain ACLs, the flexsyncd daemon running on the destination host might crash. This issue happens regardless of whether the Preserve ACLs option is selected on the Advanced tab of the Task Configuration window.</p> <p>See FlexSync Dashboard: Configure Replication Tasks in the FlexSync Documentation Center.</p>

The Quantum logo is rendered in a bold, blue, sans-serif typeface. The letter 'Q' is notably larger and more prominent than the other characters. A registered trademark symbol (®) is positioned at the top right of the final letter 'm'.

Quantum®

Quantum technology, software, and services provide the solutions that today's organizations need to make video and other unstructured data smarter – so their data works for them and not the other way around. With over 40 years of innovation, Quantum's end-to-end platform is uniquely equipped to orchestrate, protect, and enrich data across its lifecycle, providing enhanced intelligence and actionable insights. Leading organizations in cloud services, entertainment, government, research, education, transportation, and enterprise IT trust Quantum to bring their data to life, because data makes life better, safer, and smarter. Quantum is listed on Nasdaq (QMCO) and the Russell 2000® Index. For more information visit www.quantum.com.
