### 1.0 StorNext Requirements

The following requirements must be met before installing StorNext.

- Security-Enhanced Linux (SELinux) is disabled.
- Quantum requires that system clocks be synchronized for proper functionality, and recommends that NTP be used to ensure clocks remain synchronized across all nodes.
- The following packages must be installed:
  - o gcc
  - o make
- kernel-source (for systems running SUSE Linux)
- kernel-devel (for systems running Red Hat Linux)

**Note**: The version of the kernel-source or kernel-devel package must correspond to the version of the booted kernel. In addition, the system must have basic utilities installed such as perl, bash, grep, etc. as well as basic libraries. In general, StorNext will not install on a stripped-down installation of Linux.

#### 1.1 Terminology

Acronyms used within the document:

Acronym	Description
APFO	Advanced Path Failover
DDM	Distributed Data Mover
DLC 1	Distributed LAN Client
DLS <sup>23</sup>	Distributed LAN Server / Gateway
FX	StorNext FX Client
HA <sup>4</sup>	High Availability
LTFS	Linear Tape File System
LTS	Long Term Support (Ubuntu)
MDC 5	Meta-data Controller
RHEL	Red Hat Enterprise Linux
SLES	SuSE Linux Enterprise Server
SC	File System SAN Client
SN	StorNext
SNFS	StorNext File System
SNSM	StorNext Storage Manager
XWD	Xcellis Workflow Director
XWE	Xcellis Workflow Extender

StorNext Distributed LAN clients can be connected to either Distributed LAN Servers or StorNext G300 appliances.

<sup>&</sup>lt;sup>2</sup> Distributed LAN Server on Windows supports up to 128 Distributed LAN Clients.

<sup>&</sup>lt;sup>3</sup> Gateway instrumentation is not available for Windows.

<sup>&</sup>lt;sup>4</sup> HA and GUI are supported on StorNext M Series Appliances and supported MDCs.

<sup>&</sup>lt;sup>5</sup> Initial availability of StorNext 5 is on StorNext Metadata Appliances.

### Quantum, StorNext,

#### 2.0 System Requirements for Quantum StorNext Metadata Controllers

- StorNext 6 shared file system requires 3GB of memory.
- StorNext 6 managed file systems require 7GB of memory for each file system.
- StorNext MDC nodes require a minimum of 16 GB each.
- Running larger Storage Manager deployments requires additional memory for the Storage Manager database, growing up to 48 GB for systems as the number of managed files approaches 1 Billion.
- Additionally, Quantum recommends another 8 GB of RAM on the MDC node(s) for each file system to be used for buffer cache, to take advantage of the performance improvements in StorNext 5.
- For planning purposes, 10B unmanaged and 1.4B managed file counts are a guideline, but are not an absolute or
  enforced limit. These values reflect our current guidelines for configuring a StorNext solution the number of files
  and the performance of your solution may vary.
- LTFS StorNext Support and Memory Requirements
  - StorNext Storage Manager support for LTO-8 tape devices with Linear Tape File System (LTFS) requires StorNext 6.0.6 or later.
  - Reading and writing LTFS tape is slower than ANTF.
    - Trade-off performance for vendor independence.
    - StorNext performance is on par with any other implementation of LTFS.
  - For any MDC or any DDM client running movers and using LTFS there is extra memory needed.
  - LTFS will utilize more memory than ANTF. Each time a tape is opened, the full directory structure is pulled into memory. Thus a potential significant amount of memory is required on top of the normal StorNext requirements.
  - For StorNext, for each file on a tape, there is an associated Object file that contains specific path information. Thus the #'s listed need to be doubled. Running with StorNext, the formula from the site would actually be drives x million files x 2 +1.
  - o Example:
    - Customer has 2 million files written to an LTFS tape. Each time that tape is open the minimum amount of memory required is 2 \*2 + 1 = 5 GB of memory.
    - If on top of this one has 5 tape drives and the potential of 2 million files on each tape the minimum amount of memory required would be 5 \* 2 \* 2 + 1 = 21GB.

### 3.0 StorNext and StorNext FX Client RAM, Disk and CPU Requirements

To install and run the StorNext or StorNext FX client software, the system must meet the following minimum hardware requirements.

For SAN (FC-attached) clients or LAN clients:

- 1 GB RAM
- 500 MB available hard disk space

For SAN clients acting as a Gateway server:

- 2 GB RAM
- 500 MB available hard disk space

**Note:** Gateway servers may require additional RAM depending on the number of file systems, LAN clients, and NICs used. See "Gateway Server Memory Tuning" in the StorNext User's Guide for Gateway server memory tuning guidelines.

### Quantum, StorNext,

### 4.0 StorNext and StorNext FX Client File System Buffer Cache

Multiple mounted file systems typically share a single buffer cache. A StorNext and StorNext FX client buffer cache is created for each different cachebufsize. By default, all file systems have the same cachebufsize of 64K, so they all share the same buffer cache.

These settings do not apply to Apple Xsan Clients, which do not use the StorNext buffer cache.

The amount of memory consumed by default for each cachebufsize depends on the platform type and the amount of memory in the system. The table below shows the default amount of memory consumed by cachebufsize.

A platform with more than 2 GB of memory will use a cachebufsize of 256MB, otherwise 64MB will be used.

To see information about the buffer cache after mounting file systems, use the **cvdb(1)** command with the **-b** option. To change the amount of memory used by the buffer cache at mount time, use the **buffercachecap** parameter.

On Windows, the non-paged pool is used for buffer cache memory until it consumes up to 64 megabytes (32-bit systems) or 64 gigabytes (64-bit systems). Any additional buffer cache memory comes from the paged pool.

#### 5.0 StorNext Software Upgrade Matrix

Sites running the following StorNext versions may upgrade directly to this release assuming the platform, service pack, architecture (x86 and compatible and Intel 64 and compatible), and StorNext component(s) are supported in this release.

All other versions of StorNext require additional steps to upgrade to this release.

Customers who remain current can generally upgrade to the latest release in a single update or upgrade. Customers who fall behind on updates or upgrades require more complex procedures and should contact Quantum Professional Services.

#### **Important Notes**

- Appliances running StorNext 4.7.0 must update to release 4.7.0.1 before updating to later versions of StorNext.
- Appliances running StorNext versions 4.3.2 through 4.7.3 must first update to StorNext 5.4.0.2 before they can
  upgrade to StorNext 6.0.x.
- If your system is running StorNext 5.4.0.3 with Storage Manager, read and execute the instructions in <u>Product</u> Alert Number 48 when upgrading to later versions of StorNext.
- Customers must be at StorNext 5.3.0 or greater to upgrade directly 6.0.6.1.
- StorNext 6.x does not support M330 appliances.

#### **Supported Operating Systems and Platforms** 7.0

Note: HA and GUI are only supported on StorNext M Series Appliances and supported MDCs. Only 64-bit platforms are supported.

Note: StorNext does not install or start on a system today that has Red Hat Security-Linux (SELinux) enabled. There are checks in several configuration files and daemons that prevent the installation and use of StorNext with Red Hat Secure Linux (SELinux). There are no plans to add support for Red Hat Secure Linux (SELinux) at this time.

**Windows Server** 2008

StorNext 6.0.6	✓	✓	✓	✓	✓	✓	✓

#### Red Hat and CentOS 7

**Update 4** 

7, 8, 9, 10

StorNext 6.0.6.1 has been successfully tested with Red Hat EL and CentOS 7 update 4. Support for this distribution requires using the updated kernel, which includes the fixes necessary to correct Spectre and Meltdown security vulnerabilities 1, 2 and 3.

See Footnotes:

StorNext 6.0.6.1 does not work when used with Red Hat EL and

CentOS 7 update 5.

If you are an administrator of a non-StorNext Appliance system, then you must be careful when upgrading a Red Hat EL and CentOS operating system. You must only upgrade to levels supported in this document.

3.10.0-693.21.1 Kernel:

## 8.0 StorNext Client Interoperability

In general back-revision clients (e.g., StorNext 4.3.x clients with StorNext 5.0.x MDC) are supported for the interval of time that is required to upgrade a configuration; with the assumption that once the configuration process is complete, all clients would be at the same level.

The following table describes back-revision clients that are supported with the StorNext 6.0.x releases.

	StorNext Client Interoperability
StorNext SAN Client Version	Platform
StorNext 5 Release 5.x	Quantum recommends that clients be upgraded along with the MDC. <sup>14</sup>
StorNext 6 Release 6.x	Quantum recommends that clients be upgraded along with the MDC. <sup>14</sup>

#### **Important Notes**

- If a StorNext version is not listed, it is not supported as a back-revision client, even during the upgrade process.
- Clients ahead of a particular MDC (for example, StorNext 4.7.1 clients with StorNext 4.7.0 MDC) are not supported.
- The StorNext MDC must be running an equivalent or more recent version of StorNext than the client is running.
- StorNext G300 or DLS Gateways must be running the equivalent version of the StorNext MDC or earlier and must be running equivalent to all of their clients or newer.
- All components (for example, File System, Storage Manager, and so on) installed on the same machine must be running the same version of StorNext.
- The StorNext DDM component must be at the same version at that running on the MDC.

<sup>&</sup>lt;sup>14</sup> Except as noted to be incompatible in the table in section 6.0

### Quantum, StorNext,

## 9.0 StorNext Virtual Machine Support

StorNext supports SAN client and DLC clients running within VMware virtual machines where the operating system the client is running on is Linux or Windows. Only 64-bit platforms are supported. The following table shows general compatibility.

Operating System	Kernel or Release	File System SAN Client (See Note A)	File System LAN Client (See Note B)
Windows Server 2008 Server 2012 7 8/8.1	All SN supported service packs in the supported operating systems and platforms table	✓	<b>√</b>
RHEL 6.x	All SN supported service packs in the supported operating systems and platforms table	<b>✓</b>	<b>~</b>

SLES 12.x	All SN supported service packs in the supported operating systems and platforms table	<b>√</b>	<b>√</b>

**NOTE A**: Setting up a SAN client within a virtual machine can be complicated and should be done with great care to avoid data loss.

Guests running StorNext SAN clients have limited cluster functionality due to the use of RDMs to access storage. In particular, snapshots, vMotion, DRS, and fault tolerance are disabled. If these features are required, use DLC clients instead.

To configure StorNext SAN clients in VMware guests, be aware of the following considerations:

- StorNext Data LUNs must be assigned to each StorNext SAN client VM using Raw Device Maps (RDMs) in /Physical Mode/ on a Shared virtual SCSI adapter.
- Never use /Virtual Mode/ RDMs for StorNext LUNs.
- Consult your storage vendor for details on properly configuring the storage for use as VMware vSphere to use raw LUNs as RDMs.
- On each SAN client, generate a raid-strings file by running the command:
  - cvlabel -R > /usr/cvfs/config/raid-strings
  - Then open /usr/cvfs/config/raid-strings in a text editor and change the third column to JBOD for all storage types. This disables StorNext multi-path handling, which is not needed in a guest. The host will handle multi-pathing.

**NOTE B**: To configure StorNext Distributed LAN Clients in VMware guests, follow the same procedures you would for a physical system. There are no VMware-specific requirements or issues.

# 10.0 General Compatibility with other Products

Product	Reference
StorNext API (SNAPI)	StorNext 6.0.0 and StorNext 6.0.5 includes StorNext Application Programming (SNAPI) version 2.0.3 to ensure StorNext Storage Manager interoperability with Quantum AEL and Scalar libraries, as well as ongoing support for ISV and end-user applications.
	For your planning purposes, SNAPI will not be supported or distributed effective with the first feature-level release after StorNext 6.0.0. SNAPI 2.0.3 is the latest and final release of SNAPI.
	Beginning with StorNext 4.x, StorNext web services replaced SNAPI. Web services provides all the functionality of SNAPI, plus additional capabilities, and is included with StorNext at no additional charge.
	For compatibility between SNAPI and StorNext, see the <i>StorNext SNAPI 2.0.x Compatibility</i> document available online at <a href="http://www.quantum.com/snsdocs">http://www.quantum.com/snsdocs</a> .
	StorNext Web Services enables you to run third-party application program interfaces (APIs) with StorNext. To view the latest commands supported by the StorNext Web Services, refer to the <i>StorNext 6 Web Services Guide</i> available online at <a href="http://www.quantum.com/snsdocs">http://www.quantum.com/snsdocs</a> .
StorNext Partial File Retrieval (PFR)	For compatibility between PFR and StorNext, see the StorNext Partial File Retrieval 1.x Compatibility document available online at <a href="http://www.quantum.com/snsdocs">http://www.quantum.com/snsdocs</a> .
StorNext Connect	For compatibility between StorNext Connect and StorNext, see the StorNext Connect Compatibility Guide available online at <a href="http://qsupport.quantum.com/kb/flare/Content/connect/DocSite/PDFs/PDF_Downloads.htm">http://qsupport.quantum.com/kb/flare/Content/connect/DocSite/PDFs/PDF_Downloads.htm</a> .
StorNext Appliance Controller	For compatibility between StorNext Appliance Controller and StorNext, see the <i>Appliance Controller Compatibility Guide</i> available online at <a href="http://www.quantum.com/acc_cg">http://www.quantum.com/acc_cg</a> .
Lattus	For compatibility between Lattus and StorNext, see the appropriate Lattus Release Notes document available online at http://www.quantum.com/lattusdocs.
DXi	For compatibility between DXi and StorNext, see the appropriate DXi product page online at <a href="http://www.quantum.com/documentation">http://www.quantum.com/documentation</a> .

## 11.0 Quantum Appliance Compatibility

- This table uses StorNext M440 as a generic term that applies to the StorNext M441D, M441Q, M445D SSD and M445Q SSD models.
- This table uses StorNext M660 as a generic term that applies to the StorNext M661, M661XL, M662 M662XL and M665 SSD models.
- This table uses G300 as a generic term that applies to the StorNext G301 and G302 models.
- Appliances must be at 5.3.1 in order to update to 5.3.2.
- If your system is running StorNext 5.4.0.3 with Storage Manager, then you must read and execute the instructions in <a href="Product Alert Number 48">Product Alert Number 48</a> when upgrading to later versions of StorNext.

## 12.0 StorNext Browser Support

**Important note regarding the Software Online Help**: The tool that we used to generate the StorNext Software Online Help in the past, RoboHelp, is not supported with newer versions of supported web browsers. This issue only affects StorNext versions 5.2.0 and earlier. For combinations that are not supported, the StorNext Software Online Help does not display correctly in StorNext GUI.

The following browser versions are supported with StorNext versions 5.2.0 and earlier:

- Firefox version 36 and later
- Google Chrome version 40 and later
- Microsoft Internet Explorer version 10 and later, only if Secure Socket Layer 3.0 is disabled

Quantum recommends using the latest released version of the following browsers for the StorNext GUI:

- Firefox version 51 (or later)
- Microsoft Internet Explorer version 11 (or later)
- Chrome version 56 (or later)
- Safari version 10.12 (or later)
- Microsoft Edge version 38.14393.0.0 (or later)

#### 13.0 Supported Quantum Library and Drive List

#### **Note**

- StorNext Storage Manager supports many Quantum and non-Quantum tape devices and libraries. Many currently supported tape devices, including Quantum and 3rd party, have been retired as no longer supported by the respective vendor. For your planning purposes, please be aware that Storage Manager will no longer support the following tape devices will end effective with the first major StorNext feature release. Effective with the next StorNext feature release after StorNext 6.0.6, Storage Manager will no longer support the following tape devices:
  - o LTO generations 1, 2 and 3
  - IBM 3490, 3490E, 3592, 3480
  - Oracle 8590, 9840 and 9940
  - AIT, AITW
  - o DLT2, DLTS4, DLT2000 and DLT4000
  - CTIII and CTIV

#### **Note**

- StorNext Storage Manager support for Linear Tape File System (LTFS) based on Open LTFS
  and is compatible with other vendor's implementations. LTFS tape format provides many of the
  same features as Quantum ANTF format, with the additional benefit of multi-vendor portability.
  LTFS is an ideal format for long-term archiving use, but it is slower than ANTF.
- The StorNext 6 implementation of LTFS is based on Open LTFS version 2.1.1. Basic support for LTO-8, including LTO-M8 media, requires StorNext 6.0.5 or later.
- Support for LTO-8 with LTFS requires StorNext 6.0.6 or later.
- Advanced Path Failover does not support LTFS.

## 14.0 Supported Non-Quantum Library and Drive List

Large, complex StorNext Storage Manager solutions support the use of non-Quantum software such as Oracle StorageTek Automated Cartridge System Library Software (ACSLS) for centralized, multi-platform tape library management. Additionally, Storage Manager supports physical library partitioning to improve the utilization and logical sharing of enterprise-level tape libraries.

Note: Effective with the next StorNext feature release after StorNext 6.0.6, support for all versions of the AIT and T9840 drives will be dropped.

When using a T10000 Rev C drive with ACSLS 8.0.x, please assure that your cleaning cartridges are supported in that ACSLS release. Quantum has found a case where a cleaning cartridge isn't recognized by ACSLS 8.0.x and reports incorrect media type in the StorNext GUI. This report of incorrect media type does not prevent the cleaning cartridge from being successfully used, but can cause operator confusion. ACSLS 8.1.x corrects the issue.

## 15.0 Advanced Path Failover Compatibility

Using the StorNext Distributed Data Mover (DDM) feature can boost overall data movement performance by distributing data movement across multiple systems. To ensure data integrity, StorNext software requires the use of SCSI Persistent Reservations on StorNext metadata controllers and DDM clients. As SCSI persistent reservations control access to shared devices, such as tape, Storage Manager retains control of the tape device paths, even if a failover were to occur.

StorNext Storage Manager supports IBM Advanced Path Failover (APFO) for redundant paths to IBM LTO-6, LTO-7 and LTO-8 tape devices. Using IBM APFO requires SCSI Persistent Reservations to be turned off, as device reservations are handled by IBM's software, not StorNext.

- StorNext 6.0.5 (or later) supports LTO-8 tape devices paired with Quantum Scalar i3, i6, i500 and i6000 libraries.
- StorNext 5 supports IBM Advanced Path Failover (APFO) with IBM LTO-6 and LTO-7 tape devices installed in Scalar i500 and i6k libraries.

#### Notes:

- Advanced Path Failover does not support Quantum Linear Tape File System.
- The IBM lin\_tape driver versions 3.0.10 and 3.0.18 cannot be used with StorNext.
- See the IBM **lin\_tap.ReadMe** for latest details about supported operating system versions and for a listing of supported and non-supported versions of the **Join Driver**.
- You must enable SCSI-3 persistent reservations in the **lin\_tape.conf** file for IBM APFO if data path failover is not enabled.

For additional information on how to configure **SCSI Persistent Reservations**, see the **Tape Devices and Persistent SCSI Reserve** section in the *StorNext User's Guide* available online at <a href="http://www.quantum.com/snsdocs">http://www.quantum.com/snsdocs</a>.

#### 17.0 StorNext Security

StorNext supports two security models:

- UNIX permission bits
- Access Control Lists (ACL)

Although StorNext supports both security models, the version used depends on the client platform and system configuration settings within StorNext.

Display and manipulation of ACLs for NFSv4 is only supported when the NFS server is a StorNext Appliance running StorNext 5 release 5.4.0.1 or later.

See the StorNext Documentation Center for complete details on StorNext security.

### 18.0 Network File System Support

With some limitations outlined below, StorNext supports Network File System versions 3 and 4.

#### Limitations

- NFSv3 is not supported in an NFS-HA configuration.
- NFS-HA is only supported on the Xcellis Workflow Director.
- Due to issues with lock recovery that may occur after rebooting, file locking is not supported when concurrently sharing the same StorNext file system from multiple NFS servers.
- Concurrently sharing the same StorNext file system from multiple NFS servers is not supported when used with the StorNext NAS option.
- NFSv4 is only supported when using Linux NFS servers.
- The display and manipulation of ACLs is not supported for NFSv3. However, ACLs are still enforced.
- The display and manipulation of ACLs for NFSv4 is only supported when the NFS server is a StorNext Appliance running StorNext version 5.4.0.1 or later releases.
- NFSv4 delegations are not supported.

## 19.0 Data snpolicy Replication Compatibility

The following table provides compatibility between StorNext releases when using the replication feature.

To ensure maximum snpolicy replication performance, Quantum strongly recommends that all systems utilizing snpolicy replication upgrade to StorNext 4.7.1 (or later).

Note: If a source replication policy uses deduplication, the target policy must also use deduplication.

				Tarç	get Re	elease	)

## 21.0 FlexSync™ Compatibility

- FlexSync is a license enabled option for use with StorNext 6.0 and later.
- Supported FlexSync data mover platforms include Xcellis Workflow Directors, Xcellis Workflow Extenders and M4xx and M6xx series appliances.
- FlexSync can only be used with unmanaged file systems (source or destination); managed file systems cannot be used with FlexSync.
- Data protection solutions based on FlexSync must have at least one (1) data mover; multiple data movers
  can be used to maximize performance.
- A single data mover configuration can be used to protect local or cross-mounted file systems.
- FlexSync configurations that transmit data across a WAN or LAN connection to a remote destination use
  delta block compression to transfer only new or changed blocks to maximize network bandwidth. FlexSync
  software must be installed on all WAN or LAN connected destinations. At least two (2) FlexSync data
  movers must be licenses for WAN and LAN connected configurations.
- The FlexSync license is installed on the Xcellis or M-Series system that is also used when configuring FlexSync. This license key will state the total number of licensed data movers.

See the <u>FlexSync Documentation Center</u> for additional details regarding prerequisites, system guidelines, and compatibility.

## 22.0 QXS Interoperability and Certification

- All Quantum-branded QXS-3/4/6 fibre channel (RC models with fibre channel connectivity kit) and iSCSI QXS-6 models can be used as primary storage in a StorNext environment.
- Usage of virtual volumes is not recommended for StorNext file systems used for bandwidth intensive streaming workloads.
- Thin-provisioned and tiered storage devices should not be used if performance or consistency of performance is expected or desired.

See the QXS Interoperability Matrix for complete details on StorNext interoperability with StorNext Software.
