About the Offline File Manager (for Microsoft Windows) Client

The **Offline File Manager (for Microsoft Windows)** application allows a StorNext client to perform data movement and metadata operations within the Windows Explorer interface when a relation point is created within the StorNext file system.

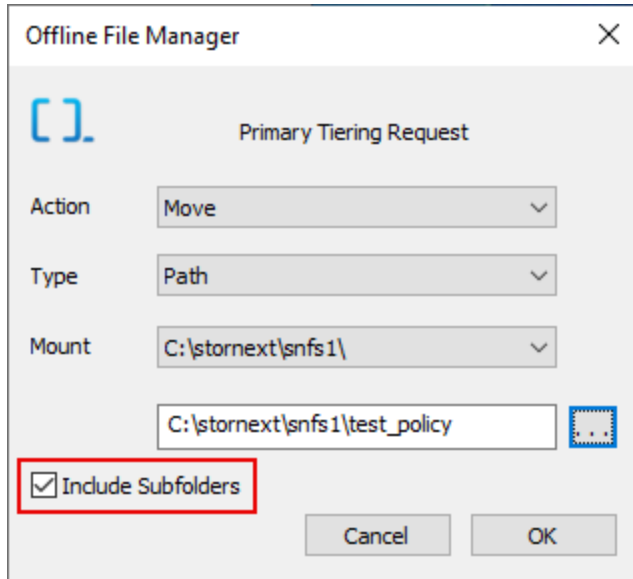

Note: No license key is required to use the Offline File Manager for Microsoft Windows application.

What's New

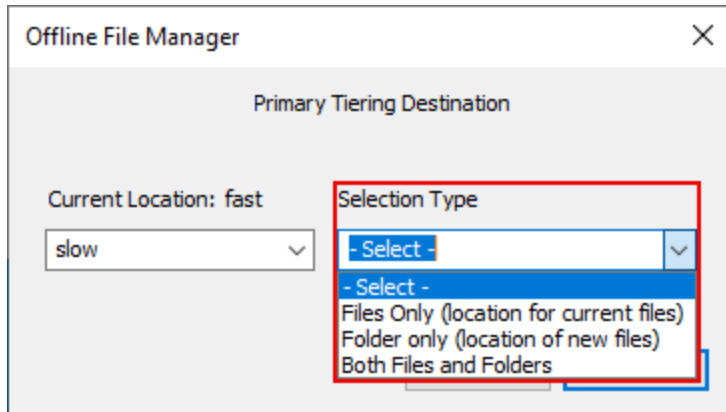

- Added the **Include Subfolders** option in the **Extended File Attributes** dialog for primary file system pooling operations on folders.

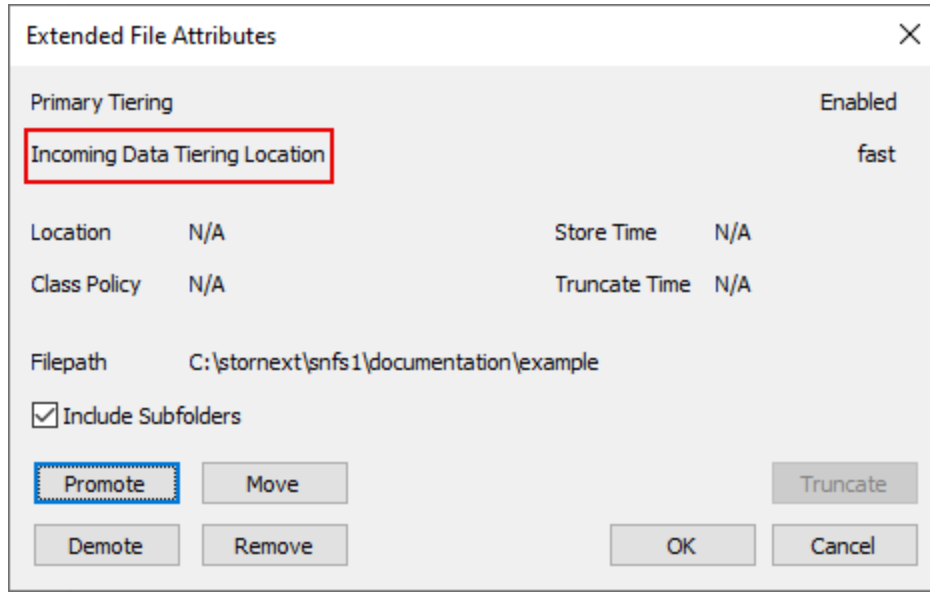

- Added the **Include Subfolders** option in the **Primary Tiering Request** dialog for primary file system pooling operations on folders.

- Added the following menu options in the **Primary Tiering Destination** dialog, under the **Selection Type** menu, to allow you to perform multiple types of file system pooling operations, such as:
 - **Files only (location for current files)**
 - **Folder only (location of new files)**
 - **Both files and folders**

- Changed the **Primary Tiering Location** label to **Incoming Data Tiering Location** in the **Extended File Attribute** dialog.

How To Download the Offline File Manager (for Microsoft Windows) Application

The **Offline File Manager** application for Microsoft Windows clients is packaged separately from StorNext and can be download as a standard Microsoft Windows executable (.exe) file from Quantum myStorNext (<https://mystornext.quantum.com/login>). See [How To Download the Offline File Manager \(for Microsoft Windows\) Application](#).

Resolved Issues

The following are the recent changes and resolved issues for Offline File Manager (for Microsoft Windows) 2.1.5.

Change Request	Description
SOF-394	Primary file system pooling does not work if "apiGatewayURI" is not in config.
SOF-397	Validate support for Windows 11
SOF-398	Primary file system pooling in window without recursive option is unknown. Should have recursive action selectable in directory.
SOF-400	When you pick to move a directory (recursively) it also moves the directory. You might not want the directory to move but instead just want the contents to move.
SOF-403	OFM does not honor recursive settings.
SOF-413	Update the documentation link in the About dialog.
SOF-415	Add warning popup for "remove" tier button.
SOF-417	Multiple opened dialogs only use values from the last dialog opened.
SOF-419	Add "Incomong data..." to action windows for directories.

Known Issues

The following are the known issues for Offline File Manager (for Microsoft Windows)2.1.5 as well as associated workarounds, where applicable.

- In StorNext 6.3.0, if you import files from an object store storage and a UUID is not used, then the icon presented is incorrect; the icon appears as an sdisk media type instead of an object store.
- In StorNext 6.3.0, Windows clients might cause a crash if mounting or unmounting fails. This is significant to the Offline File Manager because if you use a **nss_cctl.xml** file, a client that is blocked via this central control file causes the Windows client to crash.
