

Product Bulletin 15

Product: StorNext® File System 2.6 and
StorNext 2.7 on Windows XP Servers

Summary: Inability to mount more than one SNFS file system on a Windows server

Date: June 2006

Problem: When working from a Windows client, an attempt to mount more than one file system to a Windows XP server hangs the Windows Explorer for an extended period of time. The time spans from 5 to 60 minutes.

Workaround: Move the **c:\Windows\system32\cvperf.dll** file to another directory, or rename the file with an extension other than **.dll**.

Note

Moving or renaming the **cvperf.dll** file will disable SNFS performance monitoring.
